Run

Output

```
1 import numpy as np
2
3 # 3x3 matrix (Rows = Products, Columns = Sales Prices)
4 sales_data = np.array([
5     [120, 150, 130],
6     [200, 210, 190],
7     [80, 90, 100]
8 ])
9
10 # Average price of each product
11 product_average = np.mean(sales_data, axis=1)
12
13 # Overall average price
14 overall_average = np.mean(sales_data)
15
16 print("Average Price of Each Product:")
17 for i in range(len(product_average)):
18     print("Product", i+1, ":", product_average[i])
19
20 print("\nOverall Average Price:", overall_average)
```

Average Price of Each Product:

Product 1 : 133.33333333333334

Product 2 : 200.0

Product 3 : 90.0

Overall Average Price: 141.11111111111111
